As an established multinational pharmaceutical company in the pharmaceutical industry for 26 years, the Group has been fully supporting the sustainable development of education and research and development in the biopharmaceutical industry in Shenzhen, and is committed to business development and community care. During the Year, as the global pandemic gradually subsided, Hepalink seized the opportunity to re-invest resources in community development, including cooperating with Guangdong Pharmaceutical University and inviting teachers and students to visit Hepalink for exchanges. Through supporting the biopharmaceutical industry competition organised by the local government, the Group's unremitting efforts in making contribution to the community have also been recognised by the society.

## ***AIR POLLUTANT***

In accordance with the requirements of relevant laws, regulations and rules such as the Environmental Protection Law of the People's Republic of China, the Atmospheric Pollution Prevention and Control Law of the People's Republic of China, the Meteorology Law of the People's Republic of China, the Emergency Response Law of the People's Republic of China, the Interim Measures for the Administration of Emergency Response Plans for Environmental Incidents (《突發環境事件緊急應變計劃管理暫行辦法》), and the Measures of Guangdong Province on Prevention and Control of Air Pollution (《廣東省大氣污染防治條例》), the Group has established management systems and processes such as the Response Plan for Strengthening Emission Reduction of Atmospheric Pollution (《大氣污染強化減排應對方案》) to improve the emergency protection system for active control, orderly command, rapid response and effective prevention of serious pollution

In order to ensure the air pollution emissions from the factories are not exceeding the relevant requirements set out in laws and regulations, the Group strictly monitors the exhaust gas emissions generated by the equipment and in the production processes in accordance with national standards such as the "Boiler Air Pollutant Discharge Standards" and "Emission Control Standard of Volatile Organic Compounds for Industrial Enterprises", as well as engages external agency to conduct examination of emission index. In addition, we regularly collect samples from the exhaust gas outlets to detect the concentration of exhaust gas emission factors to evaluate the effectiveness of emission reduction and strengthen the maintenance and management of exhaust gas facilities.

The Group's air pollution emissions as below:

The Group's greenhouse gas emissions as below:

本集團的溫室氣體的排放量如下：

Notes:

- The calculations were based on the Reporting Guidance on Environmental KPIs issued by the Hong Kong Stock Exchange, 2006 IPCC Guidelines for National Greenhouse Gas Inventories, IPCC Sixth Assessment Report, Greenhouse Gas Emission Accounting Method for Chinese Enterprises Reporting Guidelines for Power Generation Facilities (2022 Revised Version), U.S. Environmental Protection Agency Grid Database;
- Scope 1 includes stationary combustion emissions from diesel, liquefied petroleum gas and natural gas, direct combustion emissions from mobile sources of diesel and unleaded gasoline, and fugitive emissions from refrigeration equipment;
- Scope 2 includes indirect energy emissions from purchased electricity; and
- During the Reporting Year, the total greenhouse gas emission intensity was changed from tonnes of carbon dioxide equivalent/production line to tonnes of carbon dioxide equivalent/million revenue to improve data comparability and consistency.

We will review the carbon emissions of our factories every year, prepare an annual quantitative greenhouse gas report, and submit it to a third party designated by the competent environmental protection authority for review, so as to evaluate the effectiveness of carbon reduction. The Group will continue to monitor the emission performance and strive to mitigate the impact on climate change.

In order to reduce the generation of emissions, the Group has adopted and implemented a series of emission reduction measures as below:

- Provided an online office platform, and encouraged employees to use video and telephone conferencing systems to communicate in daily office scenarios to improve work efficiency and reduce greenhouse gas generated by business travel and related

## WASTEWATER

In terms of wastewater discharge management, the Group has compiled the "Sewage Treatment Operation Regulations" in accordance with the Law on Prevention and Control of Water Pollution of the PRC, and requires the sewage treatment operators of the Engineering Operation Department to strictly follow the operation. The "Sewage Treatment Operation Regulations" covers wastewater process flow, wastewater treatment procedures, and the operating procedures of the exhaust gas purification treatment system of wastewater. The sewage generated during the production process is treated at our self-built sewage treatment station to ensure that the relevant standards are met and then discharged into the sewage treatment plant through the municipal sewage pipe network. In terms of monitoring, we have installed an online monitoring system for pollution factors at the discharge outlets of the sewage treatment station, and collect water samples every hour for testing. In addition, we have signed regular testing agreements with qualified units certified by CMA to collect samples and test the pollution factors in the drainage on a quarterly basis. The online sewage discharge monitoring system is maintained by a third party qualified unit to ensure the stable operation of equipment in the online monitoring system. Meanwhile, a third party qualified unit was engaged to conduct a data comparison on a quarterly basis, so as to confirm the accuracy and stability of online monitoring data. The above online data will be uploaded to the government's smart environmental protection platform for supervising environmental protection, so that the environmental supervision department can monitor the data and ensure that the sewage discharged meets the discharge standards of the law.

## WASTE

The Group attaches great importance to the management of solid waste. To ensure that the management and disposal of solid waste generated during the production and operation of operating plants comply with laws and regulations, the Group has formulated the Environmental Management Regulations and the Solid Waste Management Regulations to regulate the management of the generation, storage, transfer and disposal of solid waste in the production process. In accordance with the requirements of the Law of the People's Republic of China on the Prevention and Control of Environmental Pollution by Solid Waste, solid waste is entrusted to qualified units that are registered with the environmental supervision department of the government for harmless treatment, and relevant disposal agreements are signed.

## 污水

在污水排放管理方面，本集團已根據《中華人民共和國水污染防治法》編製《污水處理操作規程》，並要求工程運行部污水處理的操作人員必須嚴格按照規程進行操作。《污水處理操作規程》涵蓋廢水工藝流程、污水處理程序、污水的廢氣淨化處理系統操作程序。生產過程中產生的污水會經由我們自建的污水處理站進行處理，確保達到相關標準後再通過市政污水管網排入污水處理廠。在監察方面，我們在污水處理站的排放口安裝了污染因子線上監測系統，每一小時採集水樣本進行檢測。此外，我們與獲得CMA認證的合格單位簽訂了定期檢測協議，每季對排水中的污染因子進行採樣檢測。而污水排放線上監測系統委託第三方有資質單位進行維護，確保線上監測系統設備穩定運行。同時，另請了第三方有資質單位每季做一次資料比對，確認線上監測資料準確穩定性。上述線上數據會上傳至政府環保監管智慧環保平台，以便環保監管部門監測數據，並確保所排放的污水符合法例的排放標準。

## 廢棄物

本集團十分重視固體廢物方面的管理，為確保營運工廠生產營運過程中產生的固體廢棄物管理及處置合法合規，本集團已製定《環保管理規範》《固體廢棄物管理規範》，規範生產過程中固體廢棄物的產生、儲存、轉移、處置等環節的管理。固體廢棄物依照《中華人民共和國固體廢棄物污染環境防治法》要求，委託給有資格的並在政府環保監管部門備案過的單位進行無害化處理，並簽訂了相關處置協議。

The non-hazardous solid waste generated in the production and operation of the Group mainly includes centrifugal impurities and waste

In addition to the above measures, the Group actively supports garbage classification and promotes resource recycling and reuse. The Group provides waste classification and recycling bins in production and office areas, and requires employees to develop the habit of waste classification, and establishes corresponding management processes and treatment records. Departments that generate general industrial solid waste are responsible for dividing the area and setting up specific collection containers with clear labels, and establishing waste collection points. We ensure that the centralised storage sites for general industrial solid waste comply with the requirements of the Standard for Pollution Control on the Storage and Burning of General Industrial Solid Waste (《一般工業固體廢棄物貯存和填埋污染控制標準》) (GB18599-2020) and relevant national and local regulations and standards. Relevant departments are required to provide training to all employees to understand the meaning and role of general industrial solid waste classification, and urge employees to classify and place general industrial solid waste in corresponding containers for recycling.

The amount of hazardous and non-hazardous waste generated by the Group as below:

### 3. USE OF RESOURCES

The Group has been managing resources with a prudent attitude, actively considering and adopting various methods to reduce the use of resources. In our daily operations, resources such as electricity are mainly used. In this regard, the Group has formulated the Protocol Document for Energy Management to further strengthen our commitment to energy conservation. The protocol document provides detailed guidelines and requirements to ensure our effective management and control of energy consumption. We advocate the use of energy-saving, efficient and environmentally friendly equipment, machinery, packaging materials and office appliances recommended by the state and the industry. As priority, we choose the related equipment that could help us to reach the target of gradually increasing energy efficiency. For energy conservation, we require to adopt various energy-saving measures.

In addition, our factory in Shenzhen has obtained the ISO14001:2015 environmental management system certification and review. Every year, qualified third-party units are invited to the factory site to review the system maintenance, so as to control the potential negative impacts on the environment systematically. Meanwhile, we continuously update the latest environmental news to optimise the existing measures, so as to reduce environmental pollution. During the Year, the Group implemented the following energy-saving measures to control power consumption:

### 3. 資源使用

本集團一直以審慎的態度管理資源，積極思考並採用多種方法減少資源的使用。在日常營運中，主要使用電能等資源。為此，本集團已制定《能源管理規程文件》以進一步加強我們對節約能源的承諾。該規程文件提供了詳細的指引和規定，以確保我們有效地管理和控制能源消耗。我們提倡使用國家、行業推薦的節能、高效、環保的設備、機器、包材和辦公用具等，以逐步提高能源效益為目標優先考慮相關設備，而且針對節能要求採取各項節約能源措施。

此外，我們的深圳工廠已通過 ISO14001:2015 的環境管理體系認證及複查工作，每年請有資質的第三方單位到工廠現場對體系維護進行審查，務求以具有系統性的方式管控對環境可能造成的負面影響。同時我們亦持續更新環保的最新消息以優化現有措施，從而減少環境污染。年內，本集團實行以下的節能措施以控制耗電量：
